

Technical Data Sheet Turret Rewind Station

Version TRS-2019.1 - september 2019

Turret Rewinding Station for cutting and rewinding end rolls

The Turret Rewinding Station is integrated in-line or off-line to cut the webs in small strips with a cutter station. The rolls are then processed into smaller rolls with the desired core diameter. The Turret Rewinding Station can be made suitable for processing linerless material.

Turret Rewind Station

OPTIONS

An extensive selection of options is available on all our machines.

For more information, contact us so that we can configure the machine to your requirements.
